Why EonLabs Fuse ?

Eon Labs fuse using High Quality conductor that's got tweak inside so that can be give pure clean undistorted electric signal to car audio or car performance system.

Metal (conductor) on Fuse Eon Labs has treatment so can improve the quality of the contacts to Fuse holder.

The use of damping or dampers to eliminate bad vibrations effect from the engine and other factors.

The use of chemical filter to eliminate dirty signal which may enter into the audio system by car electricity.

Treatment is use in all part of the fuse to improve the overall efficient of electricity itself.

Specifications written on eonlabs ampere fuse is in accordance with the original specification written ampere specifications .

Many other fuse are replace it with a larger wire which can indeed can be great but not Safety to specifications written .

Why upgrade fuse with EonLabs Fuse?

Replace the fuse does not change the tuning from existing audio so as the result can be enjoyed at once.

Replace fuse is easiest way and fastest unlike replace other equipment.

Replace the fuse with a fuse oem upgrade will add audio quality and car performance of the car

Replace the fuse with wire may increase performance but the safety factor is reduced drastically fuse eonlabs using the original rating of the fuse factory-tested so that the safety factor can still be retained

Many people believe that fuse is just a fuse, yes thats absolutely correct. Eon fuse in addition to maintaining the safety fuse from the fuse itself also adds functionality filter EMI / RFI / MDI and more so that the electrical signal from the battery to the audio system and electric cars are cleaner from outside dirty noise. This dirty noise will degrade the overal Sound Quality.

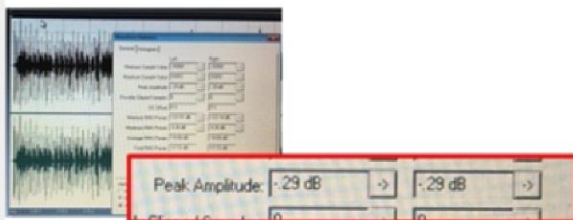

Measurement of Eon Labs Fuse by Studio Recording at South America

MEASUREMENT OF EONLABS FUSE

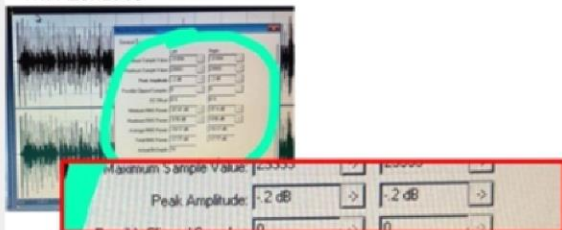

More Dynamics with EonLabs Fuse

Data is Retracted from the recording with and without EonLabs Fuse

Without EonLabs

With EonLabs

Less Resistance than using ordinary Fuses

So far the only measurable data I saw was resistance. Measured different fuses myself they were all in the 0.1 to 0.3 ohm range. The Eon one was the only one indicating 0.0ohm. Need to measure how it behaves once temperature does its thing.

7w Like Reply 3

Different response with and without use EonLabs Fuse

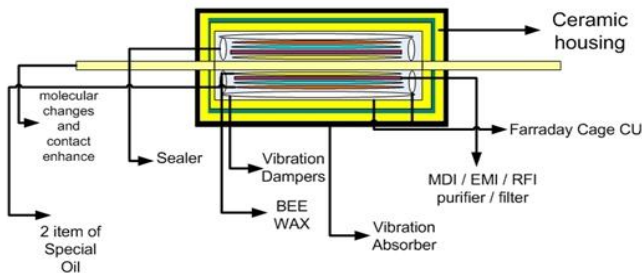

More Contact cause modified of the conductor

EonLabs Fuses Type

EonLabs Fuses MK11

MK 11

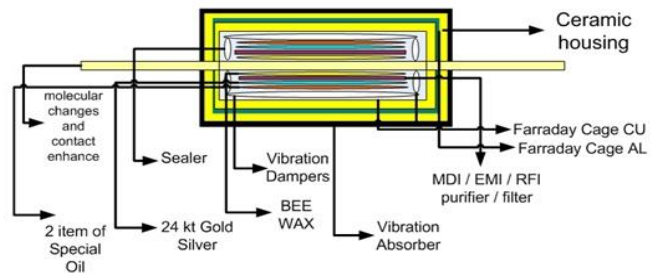

EonLabs Fuse mk 11

After 20 years of research
 After 6 years of production
 After 2.5 years from last mk 10
 Now all EonLabs Fuse production standard is MK 11.
 difference from MK 10 is rather huge , in mk 1 to 10 we are research for the inner filter / maximixer of the filter inside the fuse , for this mk 11 yes indeed we are use same indregient of the filter but the construction of the fuse are different , it look like same as before but the structure of the fuse inside are different ,

the result is more focus in sound , the instrument of the music are dead stable .
 more fast to breakin
 more clean sound , because adding cage filter to the fuse , the outside noise is more rejected by this mk 11.
 more pronounces , the artikulat of the singer is more real , is like they sing in different level

EonLabs Fuses SGO

Silver Gold Oil (SGO)

EonLabs Fuse SGO

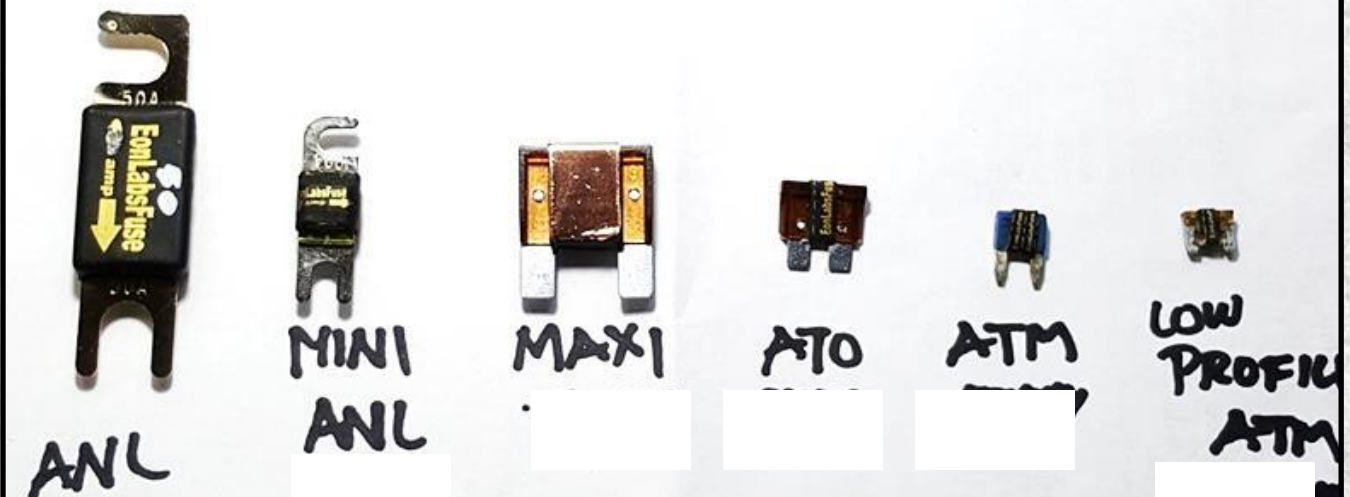

Now EonLabs Fuse add new Line of production The SGO type difference from MK 11 is rather huge , in mk 1 to 10 we are research for the inner filter / maximixer of the filter inside the fuse , for this mk 11 yes indeed we are use same indregient of the filter but the construction of the fuse are different , it look like same as before but the structure of the fuse inside are different ,

the result is more focus in sound , the instrument of the music are dead stable , more fast to breakin
 more clean sound , because adding cage filter to the fuse , the outside noise is more rejected by this mk 11.
 more pronounces , the artikulat of the singer is more real , is like they sing in different level

Same as MK11 but the indregient is add Pure Gold and Silver plus more Cage Filter noise protection from outside noise

The : Result more Accurate sound and wider sound stage , more Clean

EonLabs Tierra

WHY NEED TIERRA ? IN CAR AUDIO

AS we know that noise is go from positive side of DC current to negative side of DC

Its need Long Run to noise to return to Negative pole in the battery
This noise here is the noise from switching or other interference from other DC equipment in car

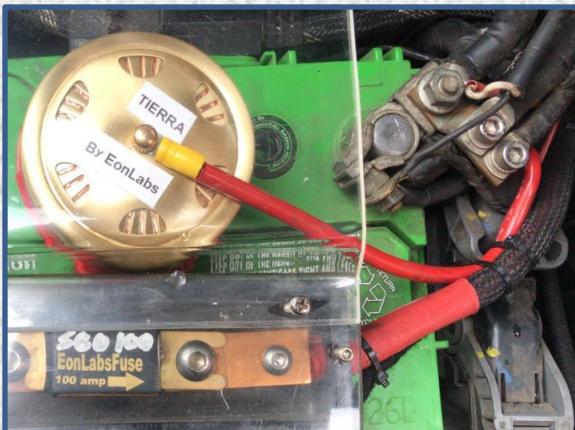

The Noise That's appear from other Equipment like ECU etc are drain to the TIERRA that's work as nearest Real Ground.
The Result is more cleaner Sound , powerfull Dinamic , darker Background and realistic Imaging , more Information from your system

Mini in Power AMP

EonLabs Fokus

Fokus

Speaker Correction Module

In audio , signals travel virtually without distortion through the electronic circuitry to the output terminals, But once the signal starts traveling beyond the output terminals and through the speaker wires, it encounters load resistance, producing a ringing, high-frequency distortion. EonLabs Fokus Speaker Corection Modules remove this harsh noise forever. Simply by connecting the appropriate EonLabs Fokus device to your loudspeaker input , noise just disappears, and sound you didn't know was there springs to vivid life. Music becomes more cleanly delineated, right down to the least nasal and metallic vocal, giving the sweetest, clearest signal you've ever experienced. And most important thing you get is more Rich and Luxury sound like never before .

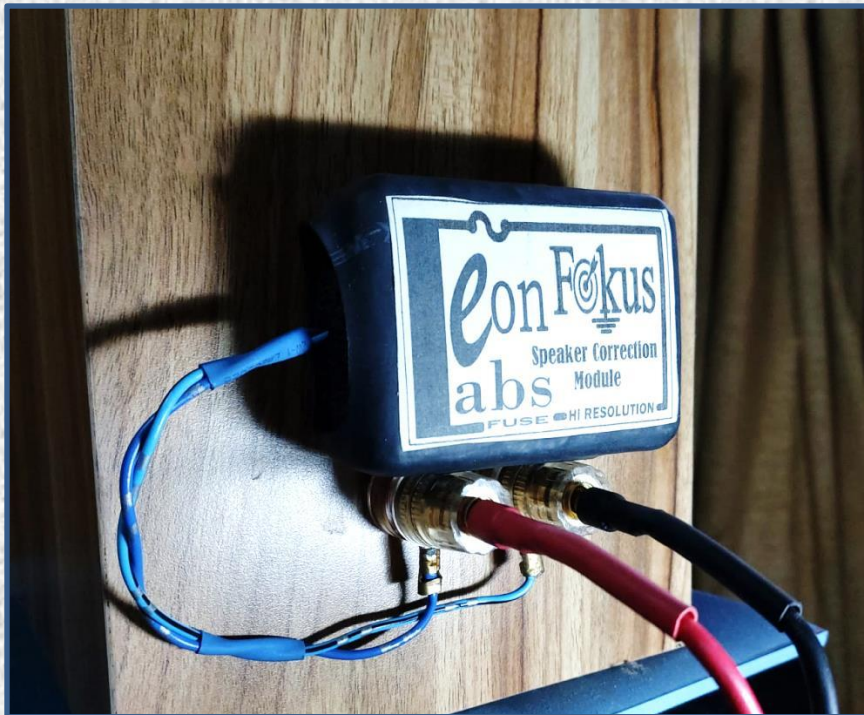

Eonlabs FOKUS

Eonlabs FOKUS FOR SUB

Installation of Fokus Lite
in Home Audio

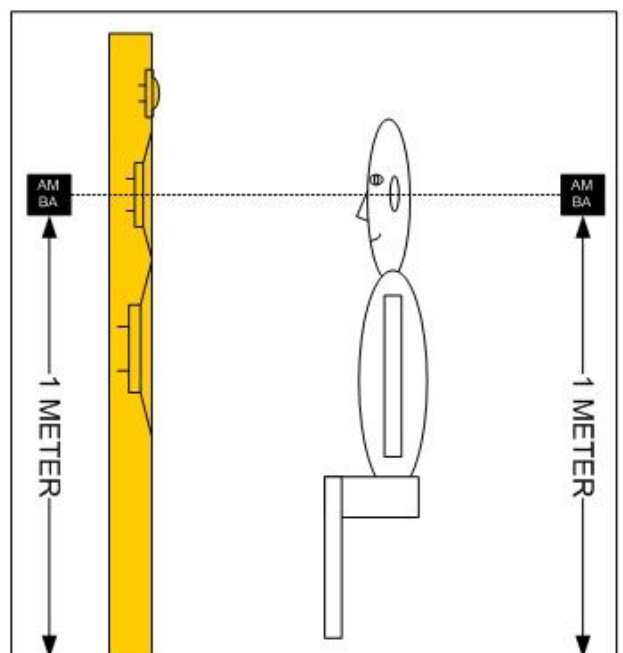

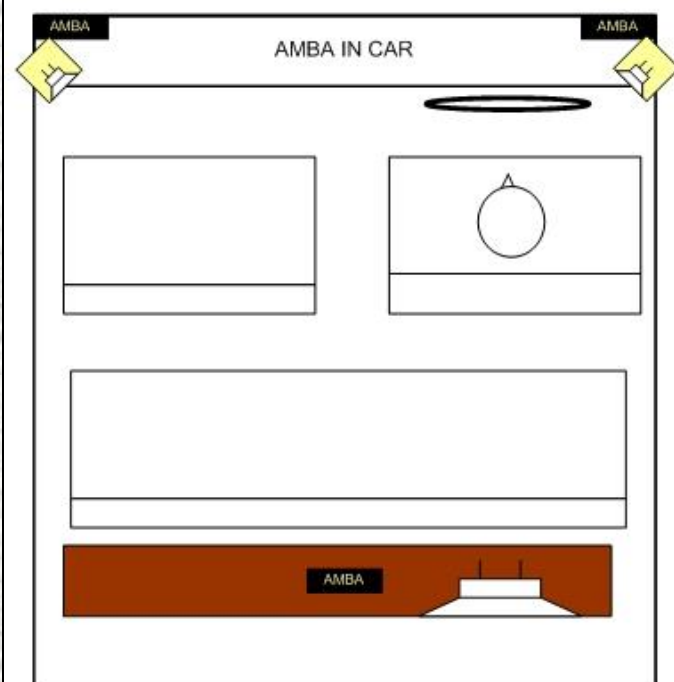

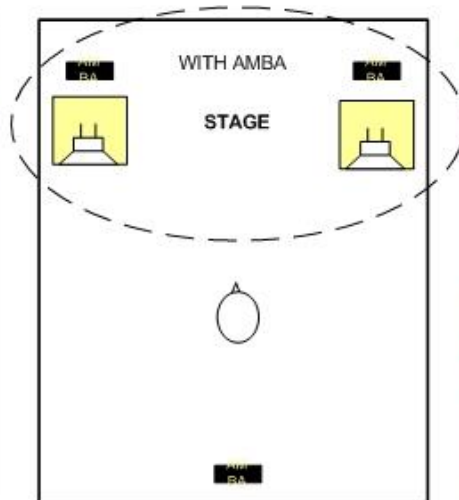

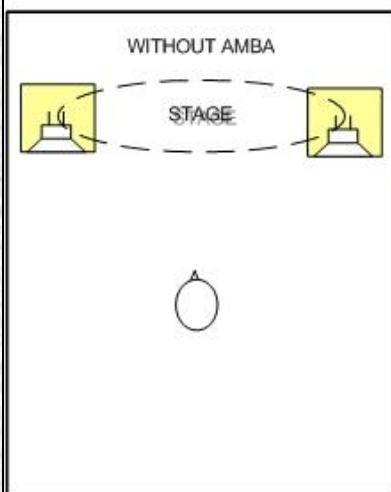

AMBA

-AMBA-

Go to the next Level Audio Performance ,

Give your Audio/Car Audio system a huge increase. With AMBA 3 sets system you will get wider listening room , more energy and more information of the recording.

Give the Performer on your software more size , precision , location and more depth so you can easily locate musician in the stage

Tierra Murnino

**Clean DC Current is essential to have Good Audio performance ,
Tierra Murnino is came for That, its have almost 2 Farads of DC
Filter and some circuit to maintenance the original tone of the
Sound , beside that Tierra Murnino have Tierra inside , so the
positive side of DC electricity and Negative side are both cleaned.**

**TIERRA
MURNINO**

Hi-Res 12 volt DC Purifier

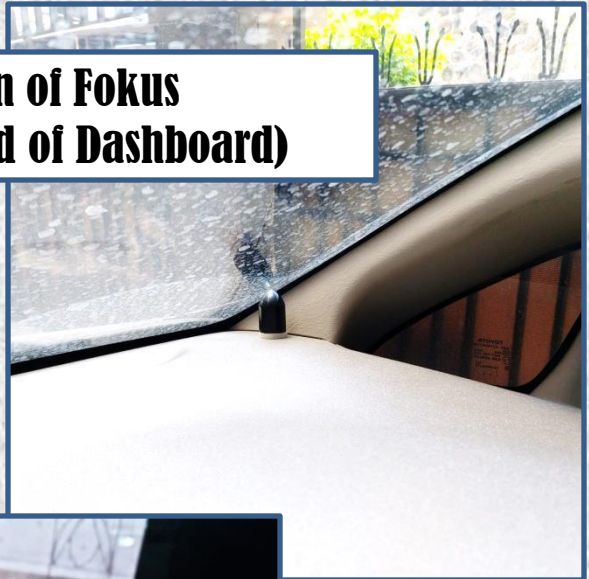

EonLabs TD Acoustics

TD Acoustics

Installation of Fokus in Car Audio (end of Dashboard)

Installation of Fokus in Home Audio

Eonlabs Rubber Audio

In Home Audio people usually use Spike to eliminate rumble of box speaker that will be ruin the sound.

In car we cant use that spike because it will ruin the car.

Introducing Rubber Audio which work like spike in home audio , its eliminates the rumble distortion so the speaker can sound what its must be.

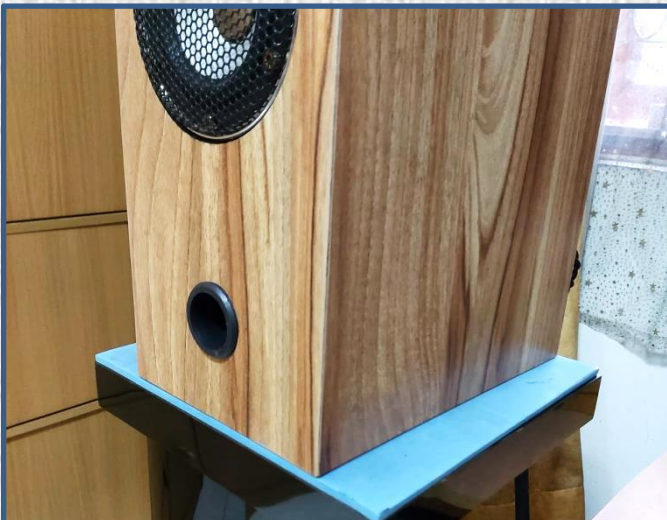

the result more clean bass , clean midrange and tweeter .

Rubber Audio

Loudspeaker Shock Absorber
